

Validation Phase 2: Document Ingestion, Dropdown Lock, and OCR/Table Extraction

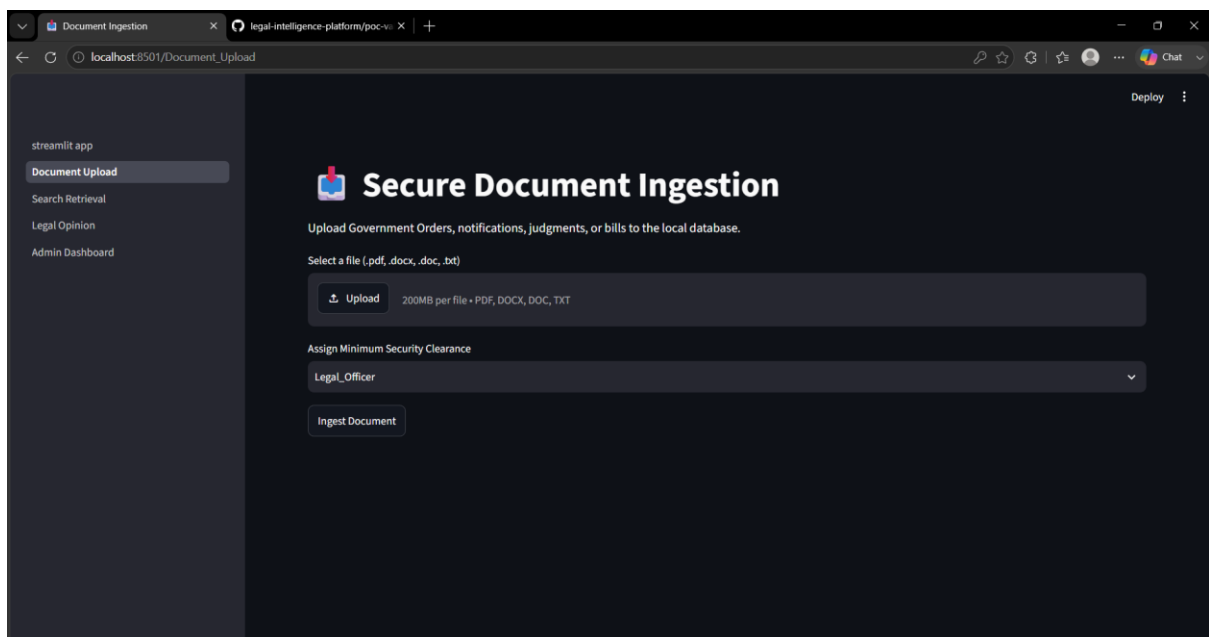

Objective: Verify that the admin can select document security levels, while other roles are locked to their own clearance tier. Validate multi-format parsing.

Test Scenario 2A: Uploading as an Administrator (Admin Role)

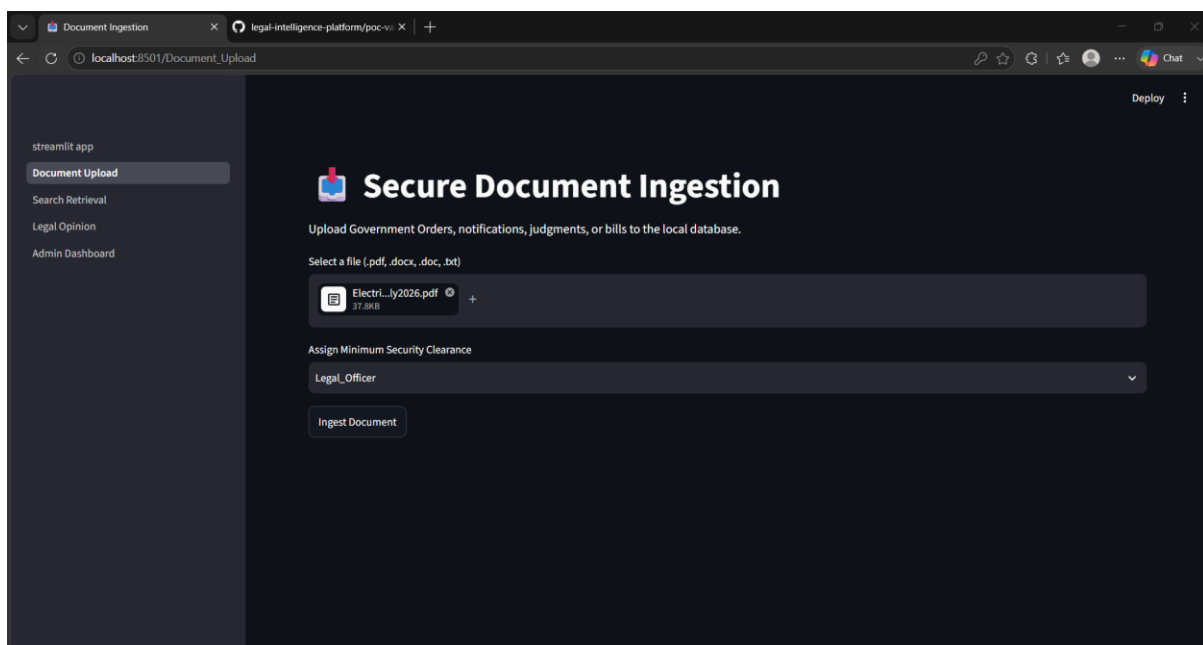

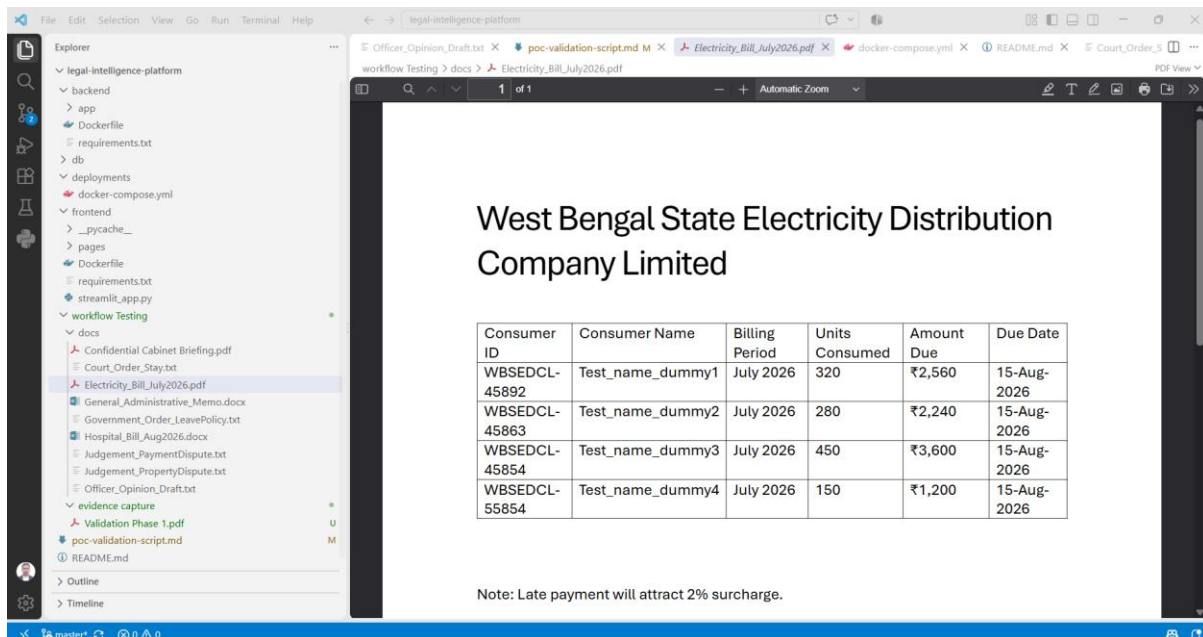

1. **Step 1:** Log in as admin (Password: admin).

2. **Step 2:** Go to 🖱️ **Document Upload** in the sidebar.

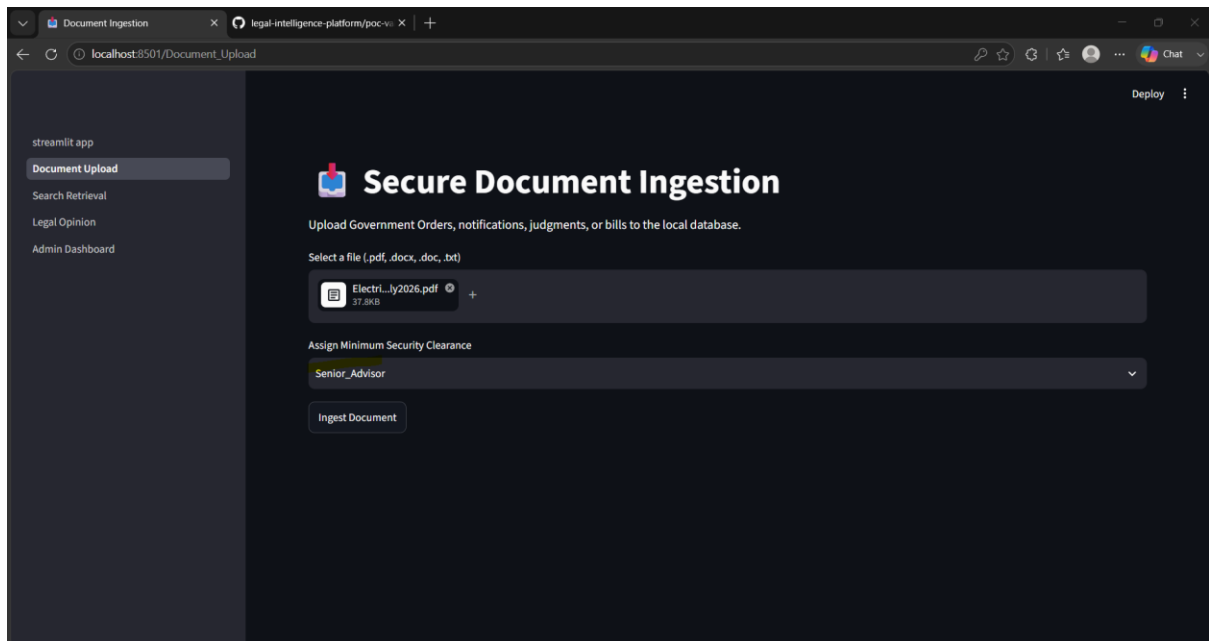

3. **Step 3:** Upload a test document containing tables or scanned text (e.g., a PDF table or scanned PDF).

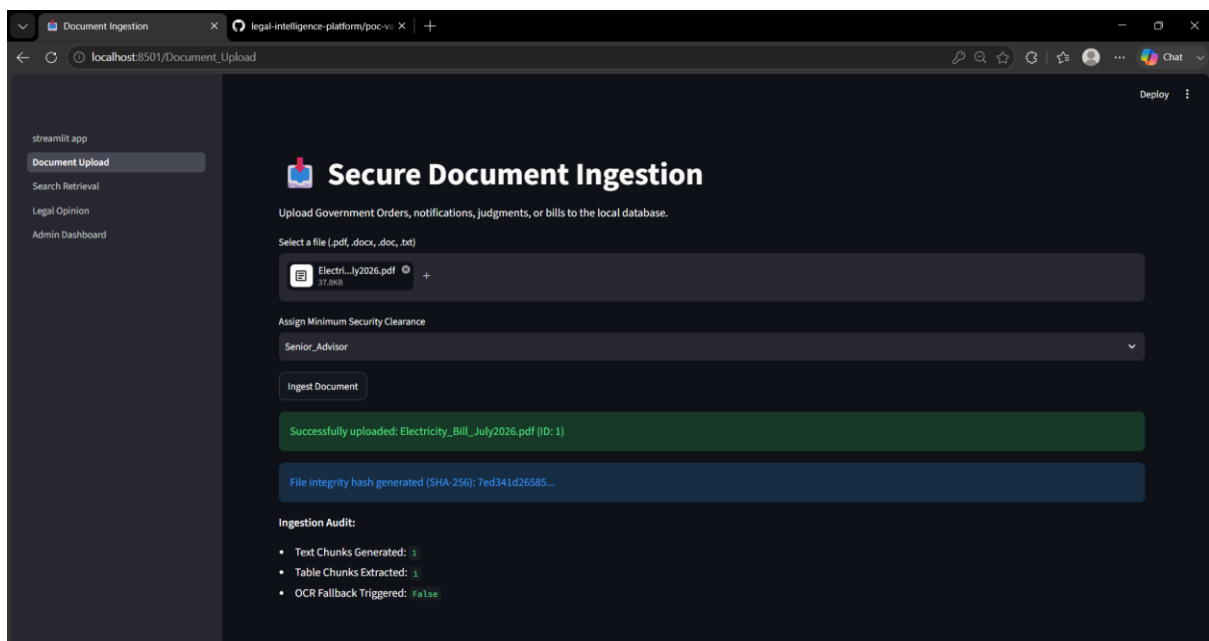

4. **Step 4:** Verify the **Assign Minimum Security Clearance** dropdown.

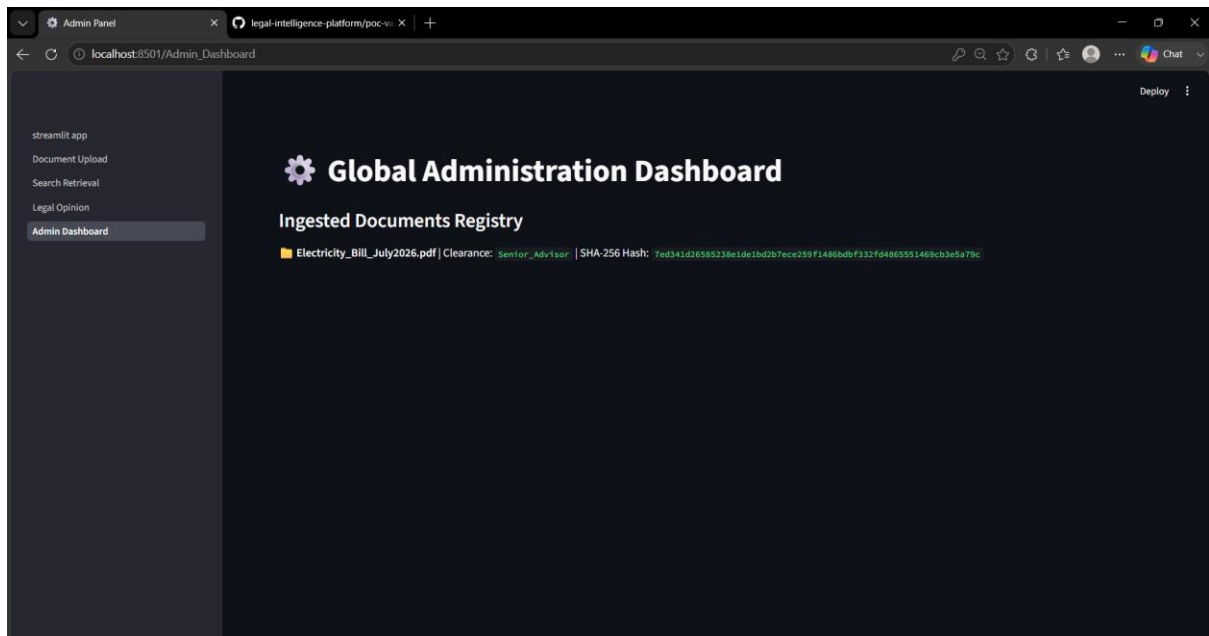

- **Expected Result:** The dropdown is active and selectable. Choose Senior_Advisor for this document.

5. **Step 5:** Click **Ingest Document**.

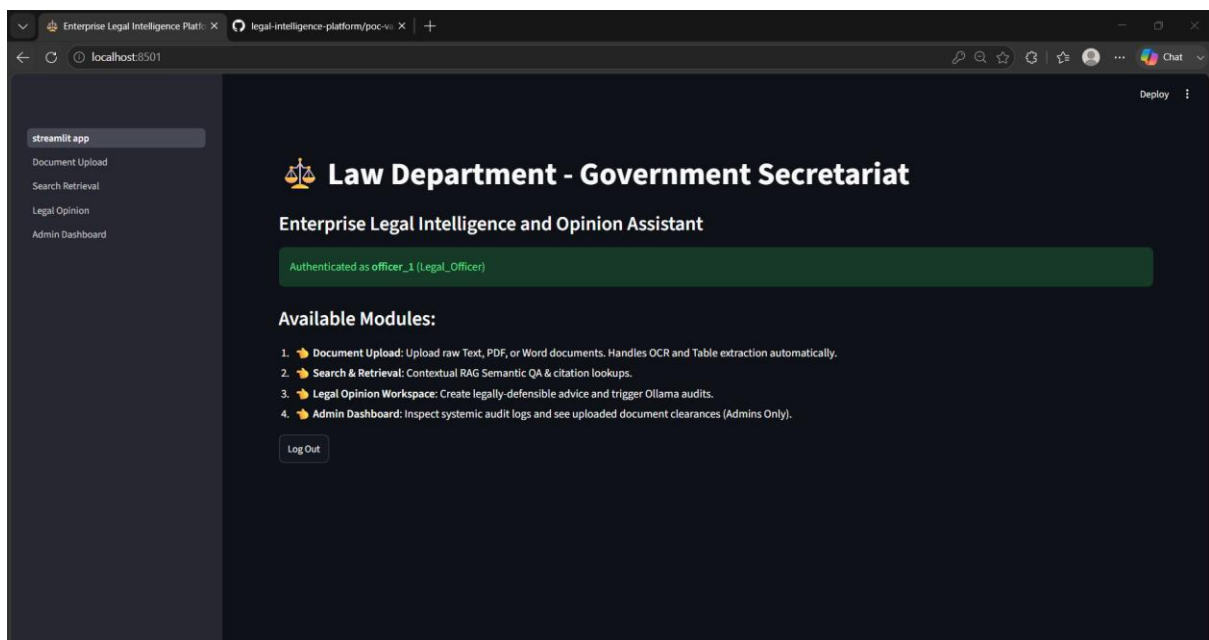

- **Expected Result:** The screen shows:
 - Text Chunks Generated: > 0
 - Table Chunks Extracted: > 0 (if a table is present)
 - OCR Fallback Triggered: False (for text PDFs) or True (for scanned files).

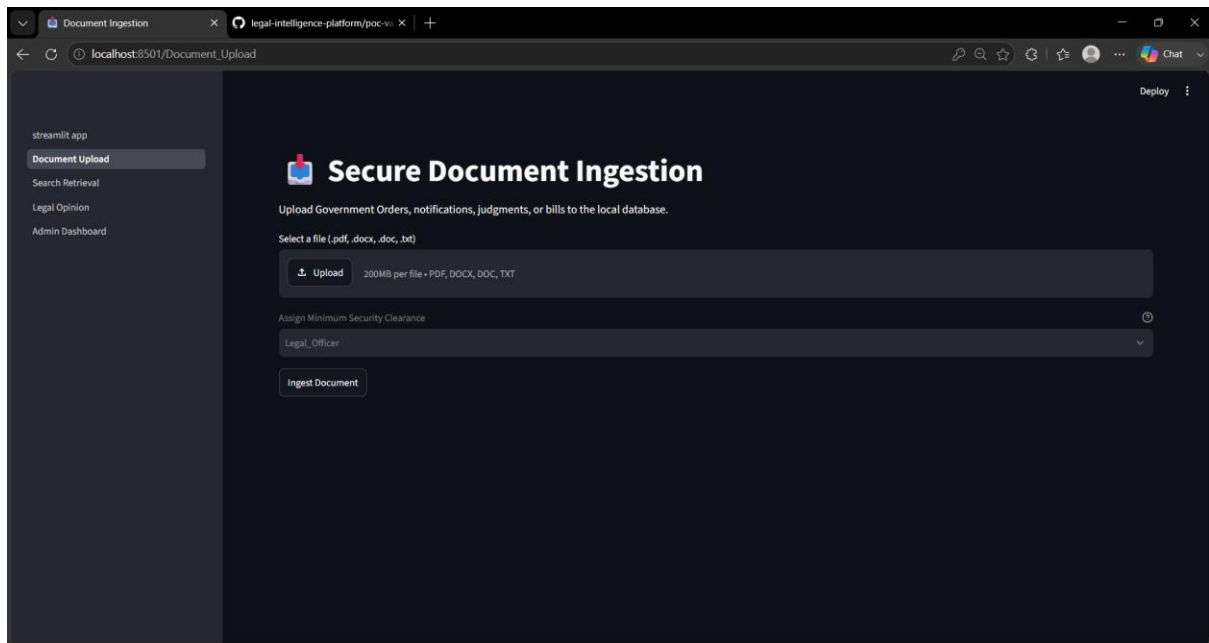

Test Scenario 2B: Uploading as a Legal Officer (Role-Based Restriction)

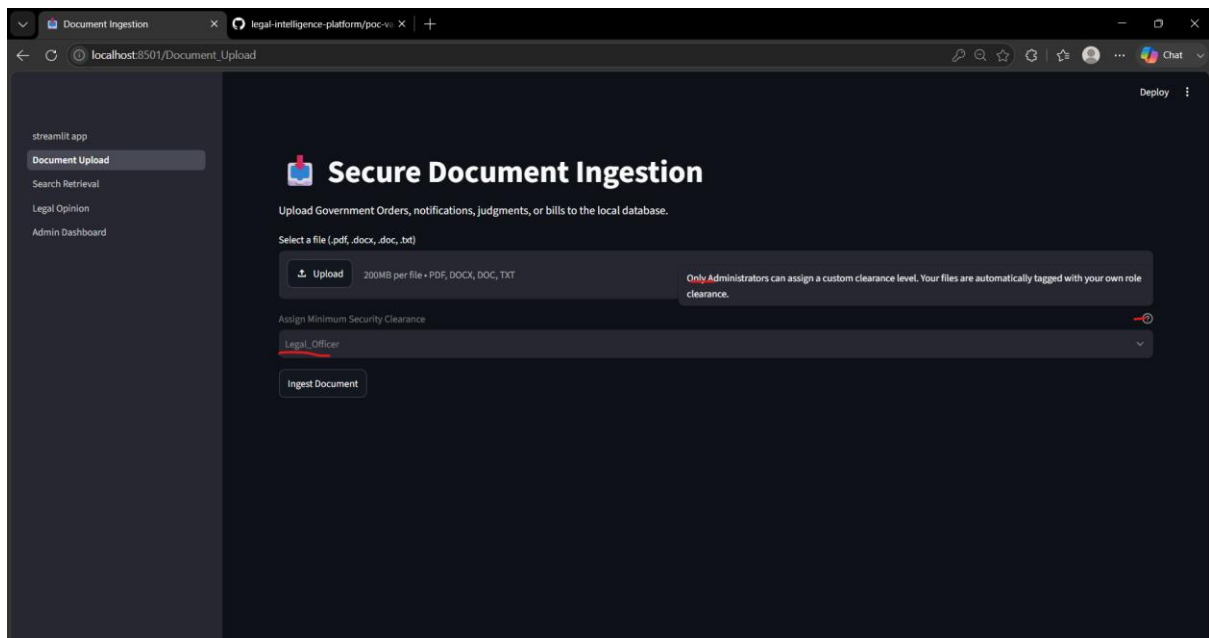

1. **Step 1:** Log in as officer_1 (Password: officer_1).

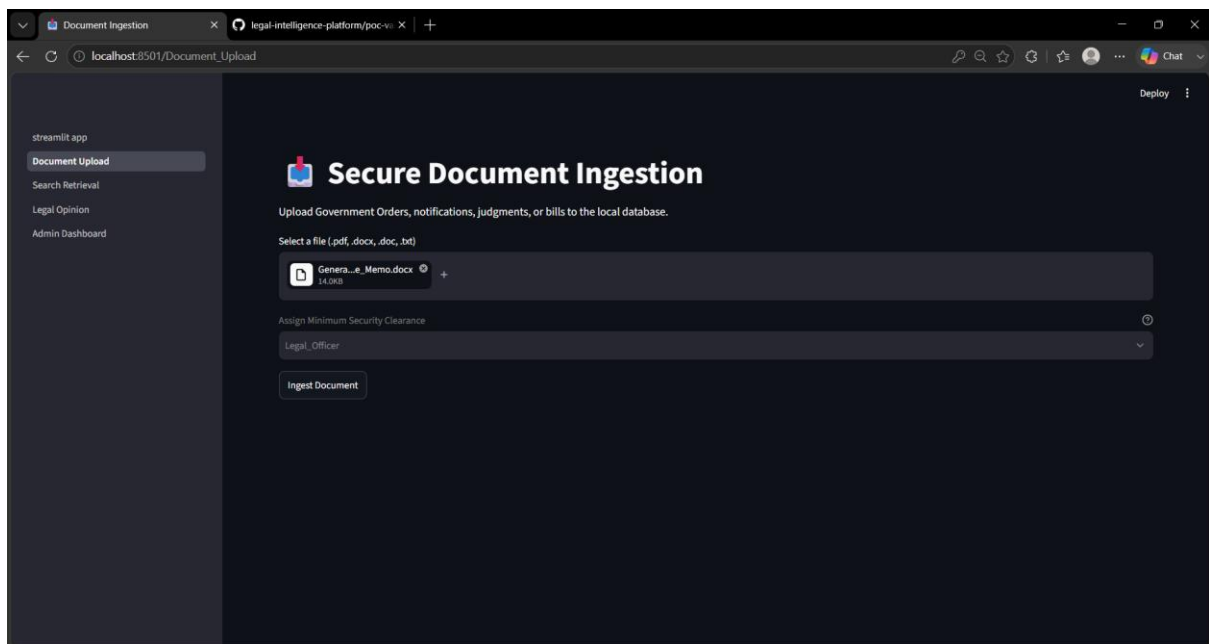

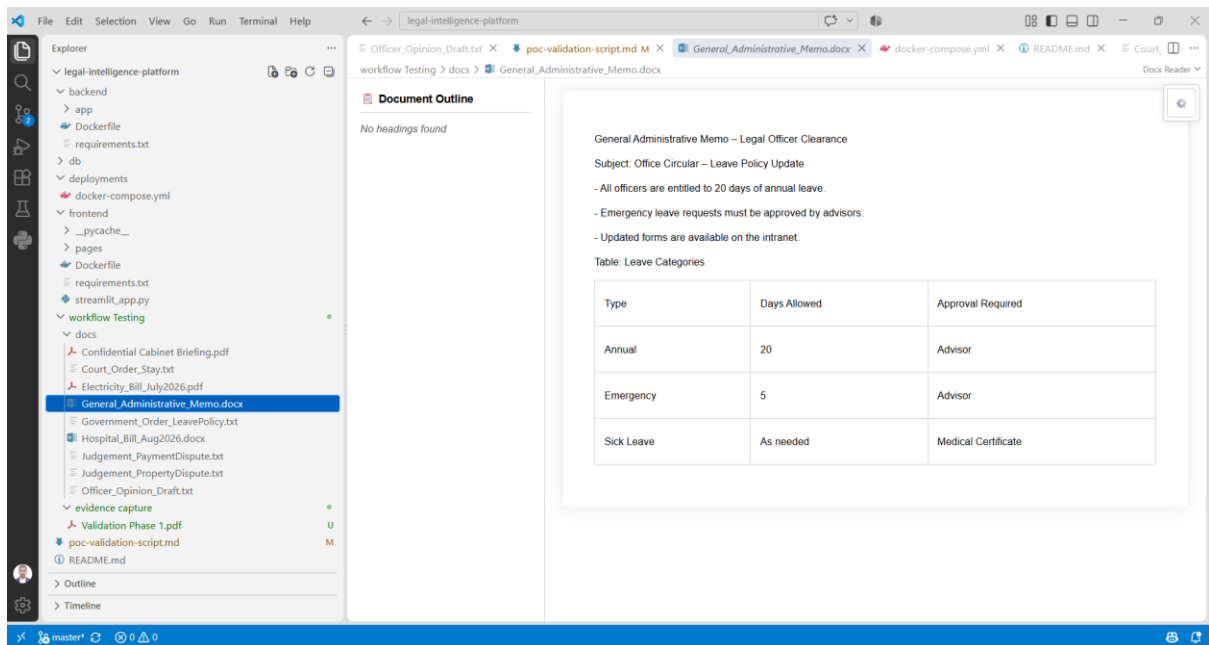

2. **Step 2:** Go to 🖱️ **Document Upload** in the sidebar.

3. **Expected Result:** The **Assign Minimum Security Clearance** dropdown is **disabled (view-only)** and locked to `Legal_Officer`.

4. **Step 3:** Upload a standard Microsoft Word document (.docx or .doc) containing a formatted table.

5. Step 4: Click Ingest Document.

- **Expected Result:** The parser successfully extracts paragraph blocks and native tables, converting tables into structured Markdown grids. The file integrity SHA-256 hash is generated.
- **Backend Verification:** Even if the client-side dropdown is bypassed, the FastAPI backend intercepts the payload and enforces `security_clearance = "Legal_Officer"`.
